

# Specialist fire safety training and facilities at Blackpool International

Blackpool International is specially equipped to provide in-depth workplace fire safety training courses.

Delegates receive a comprehensive training package so they can act decisively in an emergency scenario to help save lives and property.

Specifically designed for people working in locations such as industrial premises, hotels, offices, shops and residential care homes, the courses are run by senior fire-fighters based at the airport.

The Fire Safety Training course examines key safety issues including the correct and safe use of fire

fighting equipment, emergency evacuation procedures and steps to create a safer working environment.

The Fire Warden Training course involves specific instruction on the responsibilities, duties and roles of a Fire Warden with practical training scenarios in live fire situations.

Course content exceeds standard requirements and complies with the current fire safety legislation, Regulatory Reform Order 2005.

Courses can be arranged on a flexible and convenient basis.

**FACT: The average economic consequential cost of fire to a business in 2004 was £34,400. Employers now have a legal obligation to ensure their staff receive fire safety training and fire precautions are in place within their premises.**

## FIRE WARDEN TRAINING (one day)

Designated training for fire wardens or other people responsible for co-ordinating staff evacuation as well as ensuring company fire procedures are sufficiently robust and meet their legal obligations.

- Human behavioural responses in a fire and emergency situation
- Basic principles of fire safety and protection
- Theory and operating principles of fire extinguishing equipment
- Classes of fire
- Mechanics of fire spread
- Means of escape and evacuation procedures
- Fire assessments
- Regulatory Reform
- Movement in smoke
- Company fire procedures
- Maintaining a fire log book

## FIRE SAFETY COURSE (half a day)

This course is designed for employees who may have to use an extinguisher in the workplace.

- Combustion and extinction
- Fire classification
- How fire spreads
- Basic fire precaution and routines
- Emergency fire procedures
- Practical use of fire extinguishers
- Fire blanket use

## Blackpool International's Chief Fire Officer, Paul Galway

"Our courses are designed to tackle issues of prime importance such as human behaviour and the appropriate use of fire safety equipment, issues which are often not covered by other providers."
